

# ABOUT THE COIN

What is SpaceXpanse ROD coin?

**SpaceXpanse ROD** coin is the native cryptocurrency of the SpaceXpanse Multiverse platform. And the ROD blockchain and its core wallet serve as the foundational layer in the platform, providing essential functions such as secure value storage, transaction processing, mining, and network connectivity for users to interact with the blockchain network. Additionally, the **ROD** core wallet serves as a tool for users to manage their **ROD** holdings and participate in various activities within the platform, further enhancing its utility. See more about the platform here

ABOUT THE BLOCKCHAIN

WHAT CAN SPACEXPANSE ROD BLOCKCHAIN DO?

✓ Create, store and transact its main cryptocurrency - ROD coins, fungible and nonfungible tokens /NFTs/. ✓ Support **two** PoW algorithms: **neoscrypt-xaya and SHA-256d** - for merged mining, generating blocks every 30 seconds in 3 to 1 ratio.

✓ Grant halving the block reward every year for 5 years, then ~3% annual inflation of the block reward for 59 years.

✓ Provide fare amount of secure **data storage** in every block, delivering possibility for near real-time communication between the nodes.

✓ Allow register and transfer of **arbitrary names** /digital IDs/ for trustless user identification, which can hold and transfer value.

✓ Support **Atomic trading** for exchange of in-game assets (fungible currencies as well as non-fungible items) in a trustless manner. ✓ Possess **Play-to-Earn** functionality, which allows a part of the block rewards to be "placed" inside a decentralized application /DApp/,

where users can pick/win them up and bank them to their on-chain address. /WIP/

## Name: SpaceXpanse

Tech specs

Ticker: ROD Symbol: R **Address Letter:** R **Address Header:** 60 **P2SH Header:** 75

**Port:** 11998

**RPC Port:** 11999 Algorithm: neoscrypt-xaya and SHA-256d, for merged mining -ChainID:1899 Block Reward: 800 ROD<sup>1</sup>, halving every 1,054,080 blocks /~1 year/ for

**Block:** 120 confirmations

inflation. Reward distribution: 75%/25% - 3 neoscrypt-xaya blocks and 1 SHA256d block every 4 blocks. **Block Time:** 30 seconds **Spend:** 6 confirmations

supply will reach ~2.5 fold increment from before the start of

5 years, then imposing ~3% inflation for another 59 years when the

anyone can read it. <sup>1</sup>There is a pre-release period of 55560 blocks /around 01.07.2020 11:59PM UTC/

bytes. The owner of a name has write access to its entry, while

**Storage:** A name-value database for storing and updating entries in

each block. Names can be up to 256 bytes long, values up to 2,048

## In the beginning<sup>1</sup> it was possible to mine them with CPU by using

How to get ROD coins?

## generatetoaddress 100 YOURRODADDRESS 1000000000 in the wallet's

1. You can mine them SOLO against the SpaceXpanse ROD wallet

console, where 100 is the number of blocks to be generated and 100000000 is the number of iterations. You can also change the algo by adding sha256d at the end of it. You can mine ROD solo with the following miners: **NVIDIA Win64 Miner** 

2. You can mine them at POOL through well known mining

software You can mine ROD at pools with the following miners:

**NVIDIA Win64 Miner** 

AMD Win64 and Linux64 Miner

Pools supporting ROD mining: Look below for pools which have ROD listed

3. Buying them on cryptocurrency exchanges
